Summary of Skills

ReactJS

NodeJS / NPM

MySQL / MariaDB

Webpack

Karma

JasmineJS

Istanbul

Babel

Redux

Semantic-UI

Passion for development

ES6, JSX, HTML, SSL, CSS3, C/C++

AJAX, RESTful methodologies

SDL, SDL2, various extensions

Lua embedded scripting

Custom client / server networking

Cross platform development

(Windows, Ubuntu, CentOS)

git, github.com, gitlab.com

Current and Past Personal Projects

KR Game Studios

My portfolio website, designed from the ground up to be easy to navigate and use. It is built using ReactJS, and serves some content using simple markdown files. This demonstrates my ability to use a myriad of third party tools to achieve my goals, and to manage a cloud-based server. You can find the live pages and the source code here:

<https://krgamestudios.com/>

<https://github.com/krgamestudios/krgamestudios.com>

The Portal

The portal was created to exercise my full stack development skills, and utilizes a number of popular web technologies including ReactJS, NodeJS, MySQL and redux, among many others. It is currently incomplete.
